Future markets moved sideways this week as participants remained cautious due to increasing geopolitical uncertainty.
Rising tensions in the Middle East continued to support energy prices, pushing Brent crude above the USD 100 per barrel mark for the first time since May 22.
Furthermore, the US has announced the implementation of additional tariffs on a range of products, which will also weigh on financial and commodity markets.
Meanwhile, there are positive news from Thailand, where raw material intake has been reported at good levels. However, this favourable supply situation may be temporary, as heavy rainfall is forecasted for next week, potentially disrupting tapping activities.
In addition, Thailand's upcoming two-day national holiday may further affect raw material availability in the short term.
