Rubber prices remained firm this week, supported by limited availability and ongoing weather-related uncertainties in key producing regions.
Heavy rainfall continues to affect tapping activities and is contributing to tighter short-term supply.
Availability for prompt shipments from Vietnam and Africa remains very limited, with only a few offers currently available.
In contrast, Thailand still has some availability for short-term shipments.
At the same time, longer transit times from Asia and Africa are limiting the availability of material in Europe.
Overall, the market remains tight, particularly for prompt shipments, with supply expected to remain the key price driver in the short term.
